**RE: Self Implementing On Site Cleanup and Disposal Plan  
PCB-Containing Interior/Exterior Window & Soffit Caulk  
Bolton High School – 1963 Wing  
72 Brandy Street  
Bolton, Connecticut  
Eagle Project #10-037.11C**

Dear Ms. Tisa:

Based on the several rounds of sample results, Eagle Environmental, Inc. (Eagle) is submitting this Self Implementing On-Site Cleanup and Disposal Plan for PCB-containing interior/exterior window caulk & soffit caulk at the above referenced site in accordance with the notification requirement Section 761.61(a) (3) of USEPA Regulation 40 CFR Part 761.

Should you have any questions regarding this plan please contact me at (860) 589-8257 x209. We are looking forward to your review and approval of this Plan.

Sincerely,  
**Eagle Environmental, Inc.**

Ashis Roychowdhury

## 1.2 Project Objectives

The objective of this phase of work is to remove all PCB containing interior/exterior window caulk containing greater than or equal to 50 PPM PCB as "PCB Bulk Product Waste", to remove soffit caulk containing less than 50 PPM of PPM but over 1 PPM of PCB as "PCB Bulk Remediation Waste" and to remove all porous interior concrete blocks and exterior bricks as "PCB Bulk Remediation Waste" to meet the unrestricted use clean-up standard for high-occupancy use structure.

The overall project objective is to remove PCB materials to facilitate complete renovation of the building as new in accordance with proposed construction plans as a high occupancy use upon completing the PCB SIDP work.

Refer to Appendix E for the performance specifications to be implemented by the abatement contractor.

## 1.3 Plan Organization

The SIDP has been organized into the following sections:

### Section 1: Introduction & Background

This section includes the project introduction, building description, and project objectives.

### Section 2: Site Characterization

The Site Characterization section provides a summary of the sampling performed to delineate the nature and extent of PCB presence as required and in accordance with 40 CFR Part 761.61 (a) (3) (A-C). The section also includes the nature of the contamination including types of materials; a summary of procedures used to sample the source material and adjacent surfaces; and the location and extent of the identified contaminated areas.

### Section 3: Remediation Plan

The remediation Plan includes a discussion of how the remedial objectives defined in Section 1.2 shall be met and the remediation approach, clean up levels to be met and the post remediation verification sampling protocols to be utilized. The remediation plan is submitted in accordance with 40 CFR Part 761.61 (a) (3) (D).

### Section 4: Schedule and Certification

Under this section, the proposed scheduling for implementing this phase of remediation work and reporting is provided. This section also includes the written certification signed by the owner of the property and the other responsible parties responsibilities for the remediation, clean up and disposal in accordance with 40 CFR Part 761.61 (a) (3) (E).

## **SECTION 2: SITE CHARACTERIZATION**

This section provides a summary of the sampling performed to delineate the nature and extent of PCB presence as required and in accordance with 40 CFR Part 761.61 (a) (3) (A-C). The section also includes the nature of the contamination including types of materials; a summary of procedures used to sample contaminated and adjacent surfaces; and the location and extent of the identified contaminated areas.

Sampling was performed on several occasions. The initial site characterization of source materials, such as caulking, was performed by Eagle Environmental, Inc. of Bristol, Connecticut. Testing of adjacent porous surfaces to facilitate development of this SIDP plan was also performed by Eagle Environmental, Inc. Diagrams depicting the sampling locations of source materials and adjacent porous surfaces collected by Eagle Environmental, Inc are included in Diagrams 2-3 and 2-4 (PCB-S-1 through PCB-S-3 & PCB-C-1 through PCB-C- 3 respectively).

## **2.1 Sample Collection and Analysis**

### Sampling of Source Material

Sampling of source materials was conducted by Eagle Environmental representatives, James Webb and Chris Liberti. The sampling was performed on several occasions as follows:

January 7, 2010 – 2 Samples  
February 10, 2010 – 1 Sample  
March 15, 2010 – 1 Sample  
June 2, 2010 – 15 Samples

Sampling involved removal of bulk caulking material (source materials) on the windows and soffit using hand tools to submit in bulk form to determine PCB content. Tools utilized to collect samples were properly decontaminated between successive sampling using hexane to avoid cross contamination of samples. Each sample was placed in properly labeled containers and delivered to laboratory under proper chain of custody.

Samples were analyzed at Phoenix Environmental Laboratories, Inc. located in Manchester Connecticut. The analytical method for analysis included Soxhlet extraction method 3540C and analysis method SW846 8082.

The sample numbers, locations, material description and analysis results are summarized in Table 2.1.1. The summary table, sample results and chain of custody forms are attached as Appendix A. Diagrams PCB-S-1 through PCB-S-3 identify sample locations.

### Core Sampling of Interior Substrates for Windows

Sampling of interior adjacent porous surfaces (cmu blocks) was conducted by Eagle Environmental representatives, James Webb and Chris Liberti. on several occasions as follows:

Course 1:	October 27, 2010 – 33 Samples
Course 2:	November 4, 2010 – 17 Samples
Course 3:	November 5, 2010 – 8 Samples
Course 4:	November 24, 2010 – 8 Samples
Course 5:	December 1, 2010 – 7 Samples
Course 6:	December 17, 2010 – 6 Samples
Course 7:	December 23, 2010 – 4 Samples

#### **Additional Samples**

- Opposite Walls: February 8, 2011 – 10 samples

The first set of thirty three (33) samples was collected on October 27, 2010 from interior cmu block walls at 0-0.5" distance from the caulk (Course 1 at caulk). Seventeen (17) of these samples detected PCB at concentrations above 1 PPM. The subsequent sampling where conducted at the beginning of each half and full blocks. The second set of seventeen (17) samples was collected on November 4, 2010 from interior cmu block walls at the beginning of

the second full block (Course 2). The third set of eight (8) samples was collected on November 5, 2010 from interior cmu block walls at the beginning of the next half block (Course 3) and so on. Diagrams PCB-C-1 through PCB-C-3 identifies sample locations.

These samples were collected from the cmu blocks on one end of the representative window within the rooms. Upon detecting PCB concentrations in the substrate on that side of the window, it was decided to collect a set of samples of the first course of blocks from the corresponding side of the other window in the room. For the purpose of this testing ten (10) such samples were collected on February 8, 2011. It was decided to assume the opposite wall also contaminated with PCB if the PCB concentration was above 1 ppm. Samples of the "infill" cmu blocks between the windows did not detect any PCB.

Eagle Environmental conducted sampling of masonry in accordance with EPA "Draft Standard Operating Procedures for Sampling Concrete in Field" (dated December 30, 1997). Sampling involved first complete removal of bulk product materials (source materials) at sampling locations using hand tools. Intent was to ensure complete removal of source material prior to sampling adjacent surfaces. Once removal of the source material was performed, the porous surfaces were cleaned using wire brush and the surface was rinsed with water. The porous surfaces were sampled using a mechanical hammer drill to obtain enough material for analysis. .

All samples collected were transmitted to Phoenix Environmental Laboratories, Inc. of Manchester, CT. The analytical method for analysis included Soxhlet extraction method 3540C and analysis method SW846 8082.

The sample numbers, locations, material description and analysis results are summarized in Table 2.1.2. The summary table, sample results and chain of custody forms are attached as Appendix B. Diagrams PCB-C-1 through PCB-C-3 identify sample locations.

#### Core Sampling of Exterior Substrates for Windows

Sampling of exterior adjacent porous surfaces (bricks) was conducted by Eagle Environmental representative, James Webb on two occasions as follows:

Course 1:      October 27, 2010 – 36 Samples  
Course 2:      November 5, 2010 – 19 Samples

The first set of thirty six (36) samples was collected on October 27, 2010 from exterior brick walls at 0-0.5" distance from the caulk (Course 1 at caulk). Nineteen (19) of these samples detected PCB at concentrations above 1 PPM. The second set of nineteen (19) samples was collected on November 5, 2010 at the beginning of the next brick. These samples were all analyzed to be "None Detected" for PCB with Reporting Limit (RL) less than 1 ppm; therefore no additional sampling was necessary.

Eagle Environmental conducted sampling of masonry in accordance with EPA "Draft Standard Operating Procedures for Sampling Concrete in Field" (dated December 30, 1997). Sampling involved first complete removal of bulk product materials (source materials) at sampling locations using hand tools. Intent was to ensure complete removal of source material prior to sampling adjacent surfaces. Once removal of the source material was performed, the porous surfaces were cleaned using wire brush and the surface was rinsed with water. The porous surfaces were sampled using a mechanical hammer drill to obtain enough material for analysis.

All samples collected were transmitted to Phoenix Environmental Laboratories, Inc. of Manchester, CT. The analytical method for analysis included Soxhlet extraction method 3540C and analysis method SW846 8082.

The sample numbers, locations, material description and analysis results are summarized in Table 2.1.3. The summary table, sample results and chain of custody forms are attached as Appendix C. Diagrams PCB-C-1 through PCB-C-3 identify sample locations.

### Sampling of Exterior Substrates for Soffit

Sampling of tectum soffit and the brick in contact with the caulk was conducted by Eagle Environmental representative, James Webb, on two occasions as follows:

Course 1: October 26, 2010 – 12 Samples

Course 2: October 28, 2010 – 10 Samples

The samples were collected from tectum panels and brick walls at 0-0.5" distance from the caulk (Course 1 at caulk). These samples were all analyzed to be "None Detected" for PCB with Reporting Limit (RL) less than 1 ppm; therefore no additional sampling was necessary.

Sampling involved first complete removal of bulk product materials (source materials) at sampling locations using hand tools. Intent was to ensure complete removal of source material prior to sampling adjacent surfaces. Once removal of the source material was performed, the porous surfaces were cleaned using wire brush and the surface was rinsed with water. The porous surfaces were sampled using a mechanical hammer drill to obtain enough material for analysis.

All samples collected were transmitted to Phoenix Environmental Laboratories, Inc. of Manchester, CT. The analytical method for analysis included Soxhlet extraction method 3540C and analysis method SW846 8082.

The sample numbers, locations, material description and analysis results are summarized in Table 2.1.4. The summary table, sample results and chain of custody forms are attached as Appendix D. Diagrams PCB-C-1 through PCB-C-3 identify sample locations.

## **2.2 Interpretation of Results**

The work pertaining to this Notification involves the exterior windows in the Main Office (W13 through W15), Rooms 061 through Room 070 (W16 through W25) and Rooms 047 through Room 060 (W26 through W39). The following is the interpretation of the sample results involving these windows.

### 2.2.1 Source Material Samples

The concentrations of PCB in interior window frame caulk ranged from 60 PPM – 870 PPM. As the PCB concentration exceeded 50 PPM, this source material will be removed and disposed of as PCB Bulk Product Waste.

The concentrations of PCB in exterior window frame caulk ranged from 690 PPM – 2,000 PPM. As the PCB concentration exceeded 50 PPM, this source material will be removed and disposed of as PCB Bulk Product Waste.

Only one sample of tectum soffit caulk detected PCB. The concentration of PCB in this sample was 7.9 PPM. Therefore, the soffit caulk will be removed and disposed of as PCB Bulk Remediation Waste.

### 2.2.2 Interior Adjacent Porous Materials Samples (Windows)

#### 1<sup>st</sup> Course (At Caulk)

The concentrations of PCB in the adjacent cmu blocks ranged from "None Detected" to 7.8 PPM. Note results shaded in summary table and in bold in the sample location diagram contain PCBs at 1 PPM or greater.

As the PCB concentration exceeded 1 PPM but was less than 50 PPM, the first course of cmu blocks need to be removed and disposed of as PCB Remediation Waste. The corresponding blocks associated with the other window in the room will also be removed as PCB Remediation Waste.

#### 2<sup>nd</sup> Course

The concentrations of PCB in the cmu blocks ranged from "None Detected" to 43.0 PPM. Note results shaded in summary table and in bold in the sample location diagram contain PCBs at 1 PPM or greater.

As the PCB concentration exceeded 1 PPM but was less than 50 PPM, the second course of cmu blocks also need to be removed and disposed of as PCB Remediation Waste. The corresponding blocks associated with the other window in the room will also be removed as PCB Remediation Waste.

#### 3<sup>rd</sup> Course

The concentrations of PCB in the cmu blocks ranged from "None Detected" to 18.0 PPM. Note results shaded in summary table and in bold in the sample location diagram contain PCBs at 1 PPM or greater.

As the PCB concentration exceeded 1 PPM but was less than 50 PPM, the third course of cmu blocks need to be removed and disposed of as PCB Remediation Waste. The corresponding blocks associated with the other window in the room will also be removed as PCB Remediation Waste.

#### 4<sup>th</sup> Course

The concentrations of PCB in the cmu blocks ranged from 0.61 PPM to 8.7 PPM. Note results shaded in summary table and in bold in the sample location diagram contain PCBs at 1 PPM or greater.

As the PCB concentration exceeded 1 PPM but was less than 50 PPM, the fourth course of cmu blocks need to be removed and disposed of as PCB Remediation Waste. The corresponding blocks associated with the other window in the room will also be removed as PCB Remediation Waste.

#### 5<sup>h</sup> Course

The concentrations of PCB in the cmu blocks ranged from 0.95 PPM to 24.0 PPM. Note results shaded in summary table and in bold in the sample location diagram contain PCBs at 1 PPM or greater.

As the PCB concentration exceeded 1 PPM but was less than 50 PPM, the fifth course of cmu blocks need to be removed and disposed of as PCB Remediation Waste. The corresponding blocks associated with the other window in the room will also be removed as PCB Remediation Waste.

#### 6<sup>h</sup> Course

The concentrations of PCB in the cmu blocks ranged from “None Detected” to 34.0 PPM. Note results shaded in summary table and in bold in the sample location diagram contain PCBs at 1 PPM or greater.

As the PCB concentration exceeded 1 PPM but was less than 50 PPM, the sixth course of cmu blocks need to be removed and disposed of as PCB Remediation Waste. The corresponding blocks associated with the other window in the room will also be removed as PCB Remediation Waste.

#### 7<sup>h</sup> Course

Only two locations within the work areas needed to be sampled. The concentration of PCB in one sample was “None Detected” and the concentration in the other was 0.31 PPM.

As the PCB concentration was below 1 PPM, the seventh course of cmu blocks technically need not have to be removed and disposed of as PCB Remediation Waste. However, these blocks will also be removed and disposed of as PCB Remediation Waste.

### 2.2.3 Exterior Adjacent Porous Materials Samples (Bricks)

#### 1<sup>st</sup> Course (At Caulk)

The concentrations of PCB in the samples brick in contact with the caulk ranged from “None Detected” to 3,700 PPM. Note results shaded in summary table and in bold in the sample location diagram contain PCBs at 1 PPM or greater.

As the PCB concentration exceeded 50 PPM, the first course of brick on all three sides of the windows need to be removed and disposed of as PCB Bulk Product Waste (the top of the windows do not have any caulk and bricks on the top are not contaminated).

#### 2<sup>nd</sup> Course

The concentrations of PCB in the second course of bricks in all the samples collected were “None Detected” with “Reporting Limit” of the analytical method below 1 ppm.

As the PCB concentration was below 1 PPM, the second course of bricks technically need not have to be removed and disposed of as PCB Remediation Waste. However, these blocks will also be removed and disposed of as PCB Remediation Waste.

### 2.2.4 Exterior Adjacent Porous Materials Samples (Soffit)

#### 1<sup>st</sup> Course (At Caulk)

The concentrations of PCB in the first course of samples of tectum and bricks in contact with the caulk were “None Detected” with “Reporting Limit” of the analytical method below 1 ppm.

As the PCB concentration was below 1 PPM, the tectum panels and the bricks in contact with the caulk need not have to be removed and disposed of as PCB Remediation Waste.

### **SECTION 3 – REMEDIATION PLAN**

The work described in this SIDP shall meet the objectives identified in section 1.2 Project Objectives in accordance with 40 CFR Part 761. The remediation work shall be performed to ensure compliance with EPA Toxic Substance Control Act (TSCA) requirements and protect both public health and the environment. Materials classified as PCB Bulk Product Waste and PCB Bulk Remediation Waste shall be properly removed and disposed of in compliance with federal and state regulatory requirements.

The proposed remediation activities to be performed by remediation contractor shall include the following:

1. Site preparation and controls to facilitate remediation of PCBs.
2. Health and Safety in accordance with Occupation Safety and Health Administration (OSHA) requirements.
3. Removal and off-site disposal of PCB caulking materials containing PCB >50 PPM as PCB Bulk Product Waste from all locations identified. Note caulking materials have also been determined to contain asbestos.
4. On-site removal of interior porous concrete blocks walls in all interior rooms within the work area.
5. On site removal of all exterior porous brick on three sides of the windows.
6. Recordkeeping and distribution as required in accordance with 40 CFR part 761.125 (c) (5).

Remediation activities to be performed by others shall include the following:

1. Monitoring remediation activities as Owner's representative shall be performed by Eagle Environmental, Inc.
2. Collection of verification samples in accordance with sub-parts P and O of 40 CFR Part 761 for PCB analysis shall be performed by Eagle Environmental, Inc.
3. Building renovation and site restoration shall be performed by Owner's general trade's contractor under separate contract following PCB remediation.

Prior to abatement and remediation activities, site preparation and controls shall be established. PCB Bulk Product Waste containing  $\geq 50$  PPM of PCB will be removed and transported off-site for disposal at a permitted hazardous waste landfill which is an EPA, TSCA-approved facility. PCB Bulk Remediation Waste containing <50 PPM of PCB will be transported to a state-approved non-hazardous solid waste disposal facility. PCB Bulk Product Waste shall be removed and properly disposed in accordance with 40 CFR Part 761.62. PCB Remediation waste shall be removed in accordance with Self-Implementing On-Site Cleanup and Disposal requirements in accordance with 40 CFR Part 761.61.

#### **3.1 Site Preparation and Controls**

The work shall be performed in accordance with the attached performance based technical specification section included in Appendix E. Prior to initiating PCB Removal the following site controls will be implemented.

Does  
excluded  
prod. reg.  
Justificat  
since done  
review

- Remediation Contractor shall prepare a Health & Safety Plan (HASP) specific to the site and work activities to be performed (Appendix F). All workers shall follow applicable federal and state regulation with regard to work activities, including but not limited to OSHA regulation including personal protection and respiratory protection requirements.
- Work zones shall be established in accordance with technical specification to include abatement zone, decontamination zone and support zone. Work areas will be secured in the following ways:

1. Work while the school is in session

- For the sections of the building that will be under construction when the school is in session and the students will be in the building, the area will be secured by a chain link fence that surrounds the various structures while they are under construction and is locked to prevent unauthorized access. The entire work will be performed from outside using full containment procedure covering the floor and ceiling surfaces with two (2) layers of 6-mil polyethylene sheeting.
- The building has several distinct wings that allow separation of construction phases/work from occupied portion of the school. To ensure that the work will present no risk to staff or students occupying other areas, the construction area will be isolated from the rest of the building by hard physical barrier to prevent accidental entry and air exchange. Work will be performed using appropriate engineering control to prevent exposure from the work. In addition, the work will be performed in second shift from 3:00 p.m. – 12 a.m. after the students leave. Refer to technical specification section and Work Area Diagram PCB-1 for details.
- All other openings in the building interior such as unit ventilation, ducts and grilles shall be securely sealed with a single layer of 6-mil polyethylene sheeting. Refer to technical specification section for requirements.
- The contractor shall establish negative pressure inside the containment with the use of negative air filtration units with HEPA filtration. Refer to technical specification section for requirements.
- Ground protection and isolation barriers shall remain in place throughout work to collect dust and debris resulting from PCB Bulk Product Waste and PCB Bulk Remediation Waste removal. The interior floor and exterior ground surfaces will be covered to prevent contamination. All debris generated during operations including but not limited to visible caulking, dust and debris shall be HEPA vacuumed continuously throughout the work shift and at the end of the work shift to avoid accumulation. Any tears or rips that occur in polyethylene barriers shall be repaired or removed and replaced with new protections.
- All equipment utilized to perform cutting, or demolition of adjacent materials shall be equipped with appropriate dust collection systems. If ladders are utilized to remove the windows, those ladders will be properly decontaminated.

- All surfaces adjacent to materials removed shall be properly decontaminated upon completing the removal of PCB Bulk Product Waste and PCB Bulk Remediation Waste. The work to cut and remove PCB Remediation Waste will result in dust on surfaces to remain and this dust may contain PCBs. All visible dust shall be removed using HEPA vacuums and wet cleaning methods with solvent or other acceptable products.
- Appropriate PCB waste containers shall be placed adjacent to abatement zones. Containers shall be lined, covered and secured. The PCB waste containers shall be properly marked as described in 40 CFR part 761.45.

## 2. Work during summer break

- For the sections of the building that will be under construction during April break when the school will be closed and there will be no student in the building, the area will be isolated by a yellow barrier/caution tape that will surround the various structures while they are under construction and is locked to prevent unauthorized access. The entire work will be performed from outside. The exterior ground surface shall be covered by two (2) layers of 6-mil polyethylene sheeting 10 feet from the wall and 1 foot up the wall to contain the dust and debris. All other openings in the building interior such as unit ventilation, ducts and grilles shall be securely sealed with a single layer of 6-mil polyethylene sheeting. Refer to technical specification section for requirements.
- The interior of the work areas will be isolated from the rest of the building by two (2) layers of 6-mil polyethylene sheeting from ceiling to floor. The interior floor surfaces shall also be covered by two (2) layers of 6-mil polyethylene sheeting. The work will be performed in regular hours from 7:30 a.m. – 4:30 p.m. Refer to technical specification section and Work Area Diagram PCB-1 for details.
- The contractor shall establish negative pressure in the interior of the building with the use of negative air filtration units with HEPA filtration. Refer to technical specification section for requirements.
- Ground protection and isolation barriers shall remain in place throughout work to collect dust and debris resulting from PCB Bulk Product Waste and PCB Bulk Remediation Waste removal. The interior floor and exterior ground surfaces will be covered to prevent contamination. All debris generated during operations including but not limited to visible caulking, dust and debris shall be HEPA vacuumed continuously throughout the work shift and at the end of the work shift to avoid accumulation. Any tears or rips that occur in polyethylene barriers shall be repaired or removed and replaced with new protections.
- All equipment utilized to perform cutting, or demolition of adjacent materials shall be equipped with appropriate dust collection systems. If ladders are utilized to remove the windows, those ladders will be properly decontaminated.

- All surfaces adjacent to materials removed shall be properly decontaminated upon completing the removal of PCB Bulk Product Waste and PCB Bulk Remediation Waste. The work to cut and remove PCB Remediation Waste will result in dust on surfaces to remain and this dust may contain PCBs. All visible dust shall be removed using HEPA vacuums and wet cleaning methods with solvent or other acceptable products.
- Appropriate PCB waste containers shall be placed adjacent to abatement zones. Containers shall be lined, covered and secured. The PCB waste containers shall be properly marked as described in 40 CFR part 761.45.

### 3.2 Removal Procedures

The following removal procedures shall be utilized to conduct PCB Bulk Product Waste and PCB Bulk Remediation Waste removal.

#### 3.2.1 PCB Bulk Product Waste Materials

PCB Bulk Product Waste Materials including PCB interior and exterior caulk shall be handled and removed from specified locations for proper disposal. Materials shall be removed in a manner which does not breakdown the materials into fine dust or powder to the extent feasible. Tools to be utilized shall include hand tools such as sharp point scrapers to remove materials from adjacent substrates. Any mechanical removal equipment shall be appropriately fitted with dust collection systems. Any dry or brittle caulking materials or other PCB Bulk Product waste shall be removed with additional engineering controls such as use of a HEPA vacuum to remove accumulated dust or debris during removal. Once removed, materials shall be placed in lined containers or into appropriate temporary containers such as 6-mil polyethylene disposal bags for controlled transport to PCB waste containers at the end of each work shift. PCB Bulk Product Waste shall be stored for disposal in accordance with 40 CFR Part 761.40 and 761.65. All waste containers shall be appropriately labeled in accordance with 40 CFR Part 761.45.

Sequence of removal shall follow the following general requirements:

1. PCB caulking shall be removed from all interior and exterior window frame caulk at the interface of the metal frame and cmu block walls and shall be properly containerized for disposal as PCB Bulk Product Waste. Surfaces from which PCB caulking has been removed shall be cleaned with solvent based cleaner and wire brush to remove all visible caulking prior to proceeding with removal of PCB Bulk Remediation Waste.

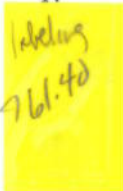

Off-site disposal of caulking associated with the window frame will be at an EPA, TSCA-approved and permitted hazardous waste landfill.

#### 3.2.2 PCB Bulk Remediation Waste Materials

PCB Bulk Remediation Waste Material includes exterior soffit caulk, porous interior cmu concrete blocks and exterior bricks. The primary waste resulting from removal of these materials will be PCB contaminated dust and debris from cutting and removal of blocks/bricks. Waste shall be immediately containerized in temporary 6-mil polyethylene disposal bags for disposal. These containers shall be sealed in abatement zone when full during collection and then placed in disposal containers/storage trailers. The containers shall not be emptied into other containers to avoid dispersal of dust or fugitive emissions. No dry sweeping, dusting or blowing shall be allowed.

The use of minimal quantities of water spray to moisten the generated dust prior to collection shall be utilized. Under no circumstances shall the PCB Remediation Waste show evidence of free liquid water or pooling within the waste stream. Any liquid used to wet the dust and debris to control fugitive emissions shall be collected and disposed of as PCB Liquid Waste in accordance with 40 CFR Part 761.61 (a). All rags and other cleaning materials used to clean shall also be properly disposed of as PCB Remediation Waste. All PCB Remediation Waste shall be stored for disposal in accordance with 40 CFR Part 761.61 (a)(5)(v)(A). All waste containers shall be appropriately labeled in accordance with 40 CFR Part 761.45. Sequence of removal shall follow the following general requirements:

1.  PCB caulking shall be removed from all exterior soffit caulk at the interface of the tectum soffit and brick wall and shall be properly containerized for disposal as PCB Bulk Remediation Waste. Surfaces from which PCB caulking has been removed shall be cleaned with solvent based cleaner and wire brush to remove all visible caulking from the substrate. The substrate (tectum panel and brick) do not need to be removed as PCB Bulk Remediation Waste as they did not detect any PCB.
2. Testing has confirmed PCB >1 PPM in the several courses of cmu blocks on either end of the rooms where work is planned in the original 1963 wing. However, samples of the "infill" cmu block between the windows did not detect any PCB. **The Owner has decided to remove all the interior cmu blocks due to PCB contamination of numerous layers and dispose them as PCB Bulk Remediation Waste.** This shall be performed using mechanical tools equipped with dust controls.
3. Testing has confirmed PCB >1 PPM in the first courses of exterior brick (at source) around the three sides of the windows where work is planned in the original 1963 wing. **The Owner has decided to remove all the exterior bricks due to PCB contamination and dispose them as PCB Bulk Remediation Waste.** This shall be performed using mechanical tools equipped with dust controls.
4.  Off-site disposal of soffit caulking and interior cmu blocks and exterior bricks associated with the windows will be at a state-approved non-hazardous solid waste disposal facility.
5.  Once materials have been removed and surfaces cleaned, Eagle Environmental, Inc. representative shall be notified. Post removal visual inspection shall be performed to verify removal and cleaning.

### 3.3 Post-Remediation Verification Sampling Plan

Following the completion of the removal of PCB Bulk Product Waste and PCB Bulk Remediation Waste, Eagle Environmental, Inc shall implement the following sampling verification plan in accordance with 40 CFR Part 761.61 (6) and to the extent applicable Sub-part O and P.

Upon completion of work in each area, a visual inspection of all remediated surfaces for visible evidence of dust and debris shall be performed. Surfaces shall also be inspected for visible PCB source materials that may not have been removed. The visual inspection shall provide in a preliminary way, verification that remediation work has been completed in accordance with this SIDP. Visual inspection shall ensure no visible dust or debris is present on adjacent surfaces

where caulking and block walls were removed. In addition to the remediated surfaces, the surfaces of protective coverings and isolation barriers shall be inspected to ensure they are cleaned of dust and debris. No sampling shall be performed until the visual inspection is complete and the clearance criteria satisfied. Sampling shall also not occur until all designated work to remove PCBs is completed.

### 3.3.1 Interior Porous Concrete Blocks

Sampling of interior porous substrates identified PCB in concentration over 1 PPM up to the sixth course of cmu blocks. **The Owner has decided to remove all the interior cmu blocks by and dispose them as PCB Bulk Remediation Waste. We do not plan to collect verification wipe sampling due to complete removal.**

Clearance wipe samples will be collected from the interior floor surfaces at the rate of one (1) wipe sample per every twenty (20) linear feet following USEPA guideline. The clearance criteria for the wipe samples will be  $<1 \mu\text{g}/100\text{cm}^2$ . If any location exceeds this clearance objective, additional cleaning will be conducted.

### 3.3.2 Exterior Porous Brick Walls

Sampling of exterior porous substrates identified PCB in concentration over 1 PPM only up to the first course of bricks. None of the samples of the second course of brick detected any PCB. **The Owner has decided to remove all the exterior brick walls and dispose them as PCB Bulk Remediation Waste. We do not plan to collect verification wipe sampling due to complete removal.**

Phoenix Environmental Laboratories, Inc. of Manchester, CT or Spectrum Analytical in Agawam, MA will analyze the samples. Both the Phoenix Laboratory and Spectrum Analytical are accredited laboratories for PCB analysis. The analysis method shall include extraction using EPA Method 3540C (Soxhlet Extraction) and analysis for PCBs using EPA Method 8082.

Eagle Environmental, Inc. also plans to collect limited background air samples with EPA 680 Homolog analysis. These samples will be analyzed by Northeast Analytical, Inc.

## **4.0 Schedule and Plan Certification**

It is the intent of the Owner (Bolton Public Schools) to begin the removal of PCB Bulk Product Waste and PCB Bulk Remediation Waste Materials during on-going abatement work in accordance with this plan. It is anticipated that the work shall be performed as expeditiously as possible to meet the construction schedule. Upon completing the PCB Remediation and verification sampling confirming that the Project Objectives have been met, the renovation work shall commence.

This laboratory is in compliance with the QA/QC procedures outlined in EPA 600/4-79-019, Handbook for Analytical Quality in Water and Waste Water, March 1979, SW846 QA/QC and NELAC requirements of procedures used.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in cursive script, appearing to read "Phyllis Shiller".

Phoenix Laboratories does not assume responsibility for the data contained in this report. It is provided as an additional tool to identify requested criteria exceedences. All efforts are made to ensure the accuracy of the data (obtained from appropriate agencies). A lack of exceedence information does not necessarily suggest conformance to the criteria. It is ultimately the site professional's responsibility to determine appropriate compliance.

This laboratory is in compliance with the QA/QC procedures outlined in EPA 600/4-79-019, Handbook for Analytical Quality in Water and Waste Water, March 1979, SW846 QA/QC and NELAC requirements of procedures used.

This report contains results for the parameters tested, under the sampling conditions described on the Chain Of Custody, as received by the laboratory.

A scanned version of the COC form accompanies the analytical report and is an exact duplicate of the original.

If you have any questions concerning this testing, please do not hesitate to contact Phoenix Client Services at ext. 200.

Sincerely yours,

A handwritten signature in cursive script, appearing to read "Phyllis Shiller".

Comments:

\* For PCBs, as per section 11.9.3, when multiple Aroclor's of PCBs are present and the aroclor is no longer recognizable, quantitation may be performed by using the total area of the PCB pattern to that of the aroclor it mostly resembles. The PCB pattern did not resemble any of the standards, but most closely resembles a mixture of the Aroclors 1254 and 1260.

-----------	--------	----	-------	------	------	----	-----------

**Comments:**

\* For PCBs, as per section 11.9.3, when multiple Aroclor's of PCBs are present and the aroclor is no longer recognizable, quantitation may be performed by using the total area of the PCB pattern to that of the aroclor it mostly resembles. The PCB pattern did not resemble any of the standards, but most closely resembles a mixture of the Aroclors 1254 and 1260.

## Draft Progress Report

November 03, 2010

FOR: Attn: Ashis Roychowdhury  
Eagle Environmental Inc.  
531 North Main Street  
Bristol, CT 06010

### Sample Information

Matrix: SOLID  
Location Code: EAGLEENV  
Rush Request: RUSH##  
P.O.#:

### Custody Information

Collected by:  
Received by: LB  
Analyzed by: see "By" below

Date Time

10/28/10 0:00  
10/29/10 14:00

### Laboratory Data

SDG ID: GAZ71473  
Phoenix ID: AZ71507

Project ID: TOWN OF BOLTON 72 BRANDY ST.

Client ID: W-37-E1-B

Parameter	Result	RL	Units	Date	Time	By	Reference
Percent Solid	100	1	%	10/29/10		TC	E160.3
Extraction for PCB	Completed			10/31/10		BB/E	SW3540C
<b><u>PCB (Soxhlet)</u></b>							
PCB-1016	ND	400	ug/Kg	11/02/10		MH	3540C/8082
PCB-1221	ND	400	ug/Kg	11/02/10		MH	3540C/8082
PCB-1232	ND	400	ug/Kg	11/02/10		MH	3540C/8082
PCB-1242	ND	400	ug/Kg	11/02/10		MH	3540C/8082
PCB-1248	ND	400	ug/Kg	11/02/10		MH	3540C/8082
PCB-1254	ND	400	ug/Kg	11/02/10		MH	3540C/8082
PCB-1260	ND	400	ug/Kg	11/02/10		MH	3540C/8082
PCB-1262	ND	400	ug/Kg	11/02/10		MH	3540C/8082
PCB-1268	ND	400	ug/Kg	11/02/10		MH	3540C/8082
<b><u>QA/QC Surrogates</u></b>							
% DCBP	109		%	11/02/10		MH	3540C/8082
% TCMX	68		%	11/02/10		MH	3540C/8082
